

Doctored in Medieval History (Universidad Complutense de Madrid). Belonging to the Archivists, Librarian and Archeologist Corporated Body I began my career as an Archivist in 2003 at State Administration General Archives (AGA), first as Reprography and Digitalization Section chief and, since 2010 as head of Description and Preservation Department.

As an experienced archivist in digital preservation I was appointed by the State Archives of Spain General Direction as a representative in different working groups.

Linked to DLM Forum Foundation since 2008 I am conscious of archival community needs and interests about e-governance (long term preservation, interoperability, access, software obsolescence...) and I would like to collaborate with EC in this sense. The AGA are the Spanish archival system the intermediate archives and first e-documents transferences will be managed there. National e-governance is under development since 2007 and several regulations have already be published, as E-Administration Law, Security National Schema, Interoperability National Schema and different implementation guides published between 2010 and 2014.
